- Spanish - Native
- Italian - Bilingual
- English - Good

CERTIFICATIONS

- IT Profile Recruitment Course
- EF SET English Certificate 72/100

Ulises D'Elia

Full Stack Developer

La Plata, Buenos Aires Province, Argentina

PROFILE

I am a Full Stack Developer with a strong specialization in backend development and scalable application architecture. I focus on building robust end-to-end products, contributing from technical definition and architecture design through implementation, integration, and production deployment. I primarily work with TypeScript, Node.js/NestJS, React, and relational and non-relational databases, developing systems that involve complex business logic, external service integrations, and a strong focus on performance, security, and maintainability. I have experience building and maintaining production applications, solving real-world challenges such as performance optimization, debugging critical issues, API design, data modeling, and integration with authentication, payment, and cloud infrastructure services. Beyond development, I actively contribute to technical decision-making, solution design, and product evolution, bringing a comprehensive perspective that combines architecture, code quality, and user experience. I am interested in creating scalable, well-designed software that solves real business problems.

EXPERIENCE

Outliers Capital

Full Stack Developer

December 2021 - Present

Santiago Metropolitan Region, Chile
